Introduction

No matter how prestigious your college is, it is ultimately the students who bring it to life. They inspire professors to excel in their teaching, drive organizational change, and represent their alma mater worldwide after graduation. Student satisfaction is closely tied to program quality, faculty teaching, campus facilities, student support, individual learning, and the overall university experience. It can be measured through academic experiences, support services, campus life, and faculty engagement. Ultimately, student satisfaction leads to student fulfillment, academic success, employability, loyalty, alumni contributions, and university reputation enhancement.

In this context, we are dealing with Generation Z, also known as "Zoomers," who have distinct characteristics that require a shift in educational approaches. Courses should be designed with backward design and learner-centered methodologies to meet their needs and adapt to changing expectations, diverse classrooms, and evolving job markets. Hence, the Faculty of Engineering at Ain Shams University, as dedicated educators, and human capital, has introduced a block-based academic system. This approach allows a single course to be taught using various pedagogical methods, ensuring student interactivity. It also promotes extracurricular activities and practical field training, bridging the gap between academics and the job market.

What's New in these bylaws?	ما الجديد في هذه اللائحة؟
Student Centered Approach 'considering current characteristics'	النهج المتمحور حول الطالب "مراعاة خصائصه الحالية"
Embedding / Integrating Business and Industry 'to assure practicality and support employability'	تضمين / دمج الأعمال والصناعة "الضمان التطبيق العملي ودعم قابلية التوظيف"
Introducing Minors 'for Faculty of Engineering students and other students'	إتاحة البرامج الثانوية "لطلاب كلية الهندسة وغيرها من الكليات"
Linking Programs and Courses with Sustainable Development Goals	ربط البرامج والمقررات الدراسية بأهداف التنمية المستدامة
Including Organizational Structure 'for different typologies'	توصيف الهيكل التنظيمي "لأنماط البرامج المختلفة"
Adding Graduation Thesis Course 'to enhance student skills and raise University Rank'	إضافة مقرر أطروحة التخرج "لتعزيز مهارات الطلاب ورفع تصنيف الجامعة"
Applicability to select the Major and Study its Specialization course from the very beginning 'in interdisciplinary Majors'	إمكانية اختيار البرنامج ودراسة مقرراته الفنية من أول عام أكاديمي "في البرامج البينية"
Counting Professional Certificates as Training Modules	حساب الشهادات المهنية كوحدات تدريبية
Level 2 is a checkpoint 'to aid students in better distribution for working loads'	المستوى 2 هو مستوى مفصلي "لمساعدة الطلاب في توزيع أفضل للأحمال الدراسية"
Getting benefit from the developed HE Eco-system at FoE-ASU 'Portal - CEEE – Training Center – Evolution – Student Chapters - Univ to Life Program ...'	الاستفادة من النظام الإيكولوجي المطور في كلية الهندسة جامعة عين شمس (البوابة – مركز التميز – مركز التدريب – مبادرة ارتقاء – الفروع الطلابية للمنظمات العلمية الدولية - برنامج الجامعة للحياة ...)

Article (1): Offered Programs

FoE - ASU offers variant typologies of Engineering Programs in the Credit-Hour system. Each program is administrated by a Program Executive Committee. The programs are divided according to their nature into 3 typologies: Specialized Majors, Inter-Disciplinary Majors, and Minors. They are carefully selected to satisfy the needs of the labour market in Egypt, as well as the needs of the regional labour market, which recruits many graduates from Egyptian Universities.

List of Undergraduate Major Programs offered by FoE - ASU

Engineering Major Programs	Specialized Majors	Mechanical Engineering	1	Design and Production Engineering Program
			2	Mechanical Power Engineering Program
			3	Automotive Engineering Program
			4	Mechatronics and Robotics Engineering Program
		Architectural Engineering	5	Architectural Engineering Program
		Electrical Engineering	6	Electrical Power and Machines Engineering Program
			7	Electronics and Communications Engineering Program
			8	Computer and Systems Engineering Program
		Civil Engineering	9	Structural Engineering Program
			10	Water Engineering and Hydraulic Structures Program
			11	Utilities and Infrastructure Program
	Inter-Disciplinary Majors	12	Materials Engineering Program	
		13	Manufacturing Engineering Program	
		14	Mechatronics Engineering and Automation Program	
		15	Landscape Architecture Program	
		16	Environmental Architecture and Urbanism Program	
		17	Housing Architecture and Urban Development Program	
		18	Communication Systems Engineering Program	
		19	Energy and Renewable Energy Engineering Program	
		20	Computer and Artificial Intelligence Engineering Program	
		21	Building Engineering Program	
		22	Civil Infrastructure Engineering Program	

List of Undergraduate Minors offered by FoE - ASU

Industrial and Engineering Management
Manufacturing
Manufacturing Management
Manufacturing Technologies
Biomedical Materials Engineering
Corrosion Engineering
Petrochemicals Engineering
Refrigeration and Air Conditioning
Future Energy Technologies
Autotronics
Mechatronics and Embedded System Engineering
Basic Architectural Design for Non-Architects
Specialized Environmental Architectural Design
Real Estate Management and Development
Smart Cities and Spatial Informatics
Urbanization and Development
Urban Studies
Fundamentals of Electrical Power Engineering
Electric Vehicles
Sustainable Energy
Digital Electronics
Photonics
Telecommunication Systems and Networks
Software Systems
Artificial Intelligence
Data Science
Computer Gaming
Structural Design Engineering
Construction Material Engineering for Non-Civil Engineers
Construction Management for Non-Civil Engineers
Construction Management Engineering for Civil Engineering
Construction Engineering for Non-Civil Engineers
Holistic Approach Design of Buildings
Bridge Engineering: Design and Construction
Highway Design and Construction
Sanitary and Environmental Engineering
Surveying
Transportation Engineering

Ain Shams University awards, based on the request of the Faculty Council of Engineering, the Bachelor of Science Degree in Engineering as follows:

1. Bachelor of Science in Mechanical Engineering

- Design and Production Engineering Program
- Mechanical Power Engineering Program
- Automotive Engineering Program
- Mechatronics and Robotics Engineering Program
- Materials Engineering Program
- Manufacturing Engineering Program
- Mechatronics Engineering and Automation Program

2. Bachelor of Science in Architectural Engineering

- Architectural Engineering Program
- Landscape Architecture Program
- Environmental Architecture and Urbanism Program
- Housing Architecture and Urban Development Program

3. Bachelor of Science in Electrical Engineering

- Electrical Power and Machines Engineering Program
- Electronics and Electrical Communication Engineering Program
- Computer and Systems Engineering Program
- Communication Systems Engineering Program
- Energy and Renewable Energy Engineering Program
- Computer and Artificial Intelligence Engineering Program

4. Bachelor of Science in Civil Engineering

- Structural Engineering Program
- Water Engineering and Hydraulic Structures Program
- Utilities and Infrastructure Program
- Building Engineering Program
- Civil Infrastructure Engineering Program

This awarded degree includes the Minors the student has obtained., and in case that the student is enrolled in another faculty in the university, the awarded degree includes what the student obtained from Engineering Minors.

Part III: Admission Regulations

Article (14): Enrolment Requirements and Scholarship System

- FoE - ASU is a faculty in a Public University. As stipulated in the Constitution, the university guarantees offering Specialized Majors for Free (Full scholarship). To enroll in any of these Specialized Majors and benefitting from this scholarship, the student – according to the general conditions stipulated in the executive regulations in Article (75) of the Universities Organizing Law -has to:
 1. meet the admission requirements determined by the Supreme Council of Universities.
 2. have a high school completion certificate (Mathematics section) or its equivalent.
 3. fulfill the internal rules approved by the Faculty Board regarding the admission of students to these programs.
- Interdisciplinary Majors and Minors have separate tuition fees approved by faculty board each year.
- Students who are not enrolled directly to the FoE-ASU, through the National Coordination Office, can enrol in the Inter-Disciplinary Majors, provided that they meet the requirements approved by the University Council within the framework of the Supreme Council of Universities regulating in this matter.
- Students who are enrolled directly FoE - ASU, through the National Coordination Office, can give up joining Specialized Majors and join the Inter-Disciplinary Majors paying the separate Tuition Fees.
- Students enrolled in any engineering faculties in other public universities can transfer to the FoE - ASU in accordance with the rules approved by University Council within the framework of the Supreme Council of Universities regulating in this matter.
- The Council of FoE - ASU can award extra scholarships (Faculty Scholarship) for students who have achieved a minimum GPA, or students with special financial challenges, according to the rules announced by the Faculty Council every year.
- In case that any of the top 30 students in the Egyptian General Secondary School (Mathematics section) enroll in any Inter-disciplinary Major, he will be treated as a full scholarship student, provided that he maintains GPA of no less than 3.3 in each main semester, otherwise the other rules will apply.
- If the student enrolled in any Inter-disciplinary Major registers courses equivalent to less than 12 credit hours in any main semester without an acceptable excuse, the student has to pay separate tuition fees for this semester decided by the Faculty Council at the year of this semester equivalent to the difference between what was registered and the minimum hours in Main semester (12 credit hours).
- Any credit hour that is registered in the summer semester has separate Tuition Fees decided by the Faculty Council at the year of registering the course.
- Students registered in any of the faculties of Ain Shams University can join one Minor or more. By any means, those enrolled in a faculty other than FoE – ASU are not awarded a Bachelor Degree from the FoE-ASU.
- Any student not enrolled to FoE - ASU can register any number of courses paying the Tuition Fees decided by the Faculty Council every year at the year of registering the course. This student is given a transcript of the courses he has registered in, showing his grades. By any means, he is not awarded a Bachelor Degree from the FoE-ASU.

Article (17): Enrolment to Programs

- The Faculty Council establishes general rules for admission to the programs considering the student preferences and the principle of equal opportunities as the basis for the admission of students to the offered programs, taking into consideration the available capacity.
- Free Education students who are enrolled in the Specialized Programs can transfer to the Inter-Disciplinary Programs provided that they achieve a minimum GPA of 3.85 without paying the extra fees associated with the Inter-Disciplinary Programs. They can keep this scholarship as long as they maintain the minimum GPA of 3.85.
- Considering Enrolment Requirements, students enrolled in the Inter-Disciplinary Majors can transfer to the Specialized Majors provided that they achieve a minimum GPA of 3.7. The Programs Administration Board can lower this limit based on the available capacity of the Specialized Majors.
- Student can register in one Minor or more after passing 80% of the hours of the first and second levels provided that he fulfils its (their) requirements, and in accordance with Faculty rules. As for university students from outside the Faculty, they can register in one or more Minor programs of the programs they are allowed to register in as described in Part VI and in accordance with Faculty rules.
- Students enrolled to the Inter-Disciplinary Majors enjoy the following advantages:
 - Program Selection on Admission to the Faculty without internal coordination.
 - The possibility of registering courses from the higher level without special conditions related to GPA or passing specific credit hours.
 - The possibility of registering courses outside the study plan.
 - The possibility of obtaining a Faculty Scholarship considering the rules announced by the Faculty council each year.
 - Guaranteed a maximum number of 80 students in the lecture rooms and 40 students in the tutorial classes.
 - The possibility of obtaining a double degree in partnership with a foreign university after applying the related announced rules.
- Students enrolled to the Minors enjoy the following advantages:
 - Obtaining a Minor in one of the engineering disciplines in addition to his major, which helps expand his perceptions, satisfy his desires, and improve his chances in the labor market.
 - Guaranteed a maximum number of 80 students in the lecture rooms and 40 students in the tutorial classes.

Article (19): Study Levels

- Whenever the student completes 25% of the Program requirements (36 Credit Hours), he will be transferred from one level to the next. The following Table shows the student status based on the completed number of achieved Credit Hours.

Study Levels and relation to the achieved Credit Hours.

Study Level	Student Status	Achieved Credit Hours
1	Freshman	0% to less than 25% CH
2	Sophomore	25% to less than 50% CH
3	Junior	50% to less than 75% CH
4	Senior	75% to less than 100% CH

Article (21): Program Study Duration

- The minimum allowed study duration is eight main semesters.

- The maximum allowed study duration is eight academic years, which does not include frozen semesters (suspension of registration - medical excuse - etc..) for reasons accepted by the Faculty of Engineering Council, after which the student is dismissed from the programs.
- In case that a student registers for a Minor, one academic year is added to the maximum allowed study duration specified in the previous point.
- The Faculty Council has the right to allow the student to register for an additional two consecutive main semesters in addition to summer semester, with condition that he passes at least 75% of the total credit hours of the program and of verifying the possibility of achieving graduation requirements. In case that the student is unable to fulfil the graduation requirements in this additional period, the student's position will be submitted to the University Council to take the appropriate decision with condition that he passes at least 85% of the total credit hours for the program.

Article (22): Terms of Course Registration

- The student may register courses in the main semesters with a maximum total Credit Hours according to the following rules (after approval of the Academic Advisor):
 - Up to 21 Credit Hours or 8 courses, whichever is greater for a student with a Cumulative GPA larger than or equal to 3.0
 - Up to 18 Credit Hours or 7 courses, whichever is greater for a student with a Cumulative GPA larger than or equal to 2.0, but less than 3.0
 - Up to 14 Credit Hours or 5 courses, whichever is greater for a student with a Cumulative GPA less than 2.0
- The student may register courses in the summer semester in a maximum total Credit Hours according to the following rules (after approval of the Academic Advisor):
 - Up to 9 Credit Hours or 3 courses, whichever is greater for a student with a Cumulative GPA larger than or equal to 3.0
 - Up to 8 Credit Hours or 2 courses, whichever is greater for a student with a Cumulative GPA less than 3.0
- A student may register one additional course beyond the limits mentioned above in after the approval of the academic advisor, if it will lead to his graduation at the end of this semester only if the course is offered in this semester. For the Inter-disciplinary Majors, the course will be available even if it is not offered in this semester.
- In case that the student registers for a Minor with the Major he is enrolled in, and there is one (or more) common course(s) between the two programs:
 - If the course is compulsory in the Major or was registered in the Major before registering in the Minor, the grade for this course is calculated in the cumulative GPA in the Major.
 - If the course is elective in both programs, taking into consideration the rules of registration and the scholarship system, the student has to determine the consideration of the course in any of the two programs, while selecting another elective course in the other program, at the beginning of the course registration semester. Otherwise, the grade for this course will be calculated in the cumulative GPA in the Major.
 - If the course is compulsory in the Minor and elective in the Major, taking into account the registration rules and the scholarship system, the grade for this course is calculated in the cumulative GPA in the Minor, the student has to choose another elective course in the Major.
 - In case that the grade of this course is counted while calculating the cumulative GPA in the Major, for the Minor, the student has to choose another course from the pool of courses if the course is elective, or the Executive Director of the Minor has to specify another course that helps the student to obtain the required competencies.
- Degree -either Major or Minor- and Non-Degree students can register courses as audit in some courses without calculating them in the GPA provided that there is a vacancy in these courses, and after paying the applicable

academic service fees approved by the Faculty council. Audit students are not eligible to enter the course final exam.

Article (23): Degree Awarding Requirements

- To obtain the Bachelor of Science Degree in Engineering, the student must successfully complete the required Credit Hours in one of the Majors according to the requirements stipulated in Part V, with a GPA at graduation of at least 2.0.
- The student must pass all zero-credit courses in his Program.
- The graduation project is an essential part of all the programs requirements for graduation. It is determined by the research plans of the academic departments related to the program, the student will not graduate unless he fulfils the project pass requirements. The student must pass at least 70% of the total credit hours of the program to register for the graduation project courses in Senior level.
- The student must perform Field Training in accordance with the rules stipulated in these bylaws.
- The student can study a number of courses in another University which has a cooperation agreement with Ain Shams University regarding the transfer of Credits. This requires prior approval from FoE - ASU. The Credit Hours of these courses are included in the student's graduation requirements, provided that the Credit Hours of these courses do not exceed 40% of total Credit Hours for the program.

Article (24): Field Training

- The student must perform Field Training for 8 weeks in an industrial or service facility related to the student's program and must be under the full supervision of the faculty. It is also possible to perform the training inside the faculty in a similar environment.
- The training follow-up will be handled by the academic advisor.
- Identifying a company official contact person.
- The student must submit a technical report to his academic advisor at the end of the training period.
- The training is divided into periods of 4 weeks at the end of the Sophomore and Junior levels. (Can be in the Senior level as well – open during the semester)
- Inter-disciplinary Majors students can start field training after passing a number of credit hours that are not less than 70% of the credit hours of the freshman level, provided that the period calculated for training does not exceed two weeks.
- By any means, training for a period 6 weeks at any level is allowed for only one time during the study duration.
- The field training is evaluated on pass / fail basis and does not count in the cumulative GPA calculation.
- The Inter-disciplinary Major student should pay the supervision fees for the field training at a rate of 2 Credit Hours each academic year during which the student is trained.
- The Faculty Council issues - based on the recommendation of the Education and Student Affairs Committee - a list of internationally recognized professional certificates (OSHA - NDT - LEED AP - IASP - IPMAC - CCNA ...etc) and the corresponding working load. In case that the student obtains one of these certificates, it will be calculated as a training program with the equivalent duration of the corresponding working load.

Article (25): Adding and Dropping a course

- The student may add courses in the first week of the main semesters, or the first three days of the summer semester.

- The student can drop courses with refundable fees, if applicable, until the end of the second week of the main semesters or the end of the first week of the summer semester.
- Adding or Dropping course(s) must not violate the minimum and maximum number of Credit Hours registered per semester.

Article (26): Withdrawal from a course

- The student may withdraw from any course within the first ten weeks of the main semesters or the first five weeks for the summer semester.
- The student does not fail the withdrawn course, provided that the withdrawal application and approval are finalized within the time limit mentioned in the previous point.
- The student gets a (W) grade in his academic record for the withdrawn course and is allowed to register that course (with full attendance and performing all activities including examinations) in a following semester.
- For Inter-disciplinary Major students, the tuition fees for this course will not be refunded for withdrawn courses. The next time the student registers this course, he will have to pay its fees in full. The student, who withdraws from a whole semester without registering any course must pay the minimum tuition fees which is equivalent to 12 CHs unless the withdrawal is with an acceptable excuse from the Education and Student Affairs Committee.

Article (27): Incomplete course

- If a student does not attend the final exam of the course in a semester with an excuse that is accepted by the Student Affairs Committee and approved by the Faculty Council of Engineering, the course is considered Incomplete.
- The student will temporarily get a grade (I) in the course until the exam is carried out in that course. If the student fails to attend the final exam at the next available date at the beginning of the next main semester, the student will get a grade (F) in that course. Grade (I) will not count in the student's cumulative GPA.

The student takes the exam at the beginning of the next main semester according to the detailed academic calendar approved by the Faculty Council and announced before the start of each academic year, after paying re-examination fees equivalent to one Credit Hour with the exception of students of specialized Majors in the main semesters. The marks of this final exam are added to the semester-work marks to calculate the overall grade of this course.

Article (28): Course Repeating

- The student can repeat a course for improvement if his grade satisfies the minimum passing requirement, according to the following rules:
 - The student gets the higher grade of the course after repeating. This grade is the one that will be accounted for in the cumulative GPA, on condition that the improvement should be shown in the student's transcript.
 - The maximum number of times that the student can repeat for repeating is five times during his study duration, except for improving courses with the purpose of getting out of the academic probation or satisfying the graduation requirements.
 - It is not allowed for student to improve if he completed the program's total study hours.
 - For the elective course, the student is allowed to change it in the following semesters. This is subject to the approval of the academic advisor and the requirements of his program.
 - In case that the student fails in the repetition, the previous grade for the course is cancelled and is not counted after that, the student is considered to have failed and gets an F grade.
 - The student should pay the full credit hours fees for the improving course.
- If the student fails a course (gets F grade), he should repeat the course (full attendance and performing all activities), according to the following rules:

- The maximum grade of the repeated course is B+.
- The student gets the grade of the course after repeating. This grade is the one that will be accounted for in the cumulative GPA, on condition that the repeating should be shown in the student's transcript.
- The student should pay the full credit hours fees for the repeated course, with the exception of students of specialized Majors at a maximum of one time for each course within the study plan.
- If a student repeats a course, he is required to repeat all course assessment criteria and will be completely re-evaluated. The course grade is calculated from scratch.

Article (29): Enrolment Suspension

The Faculty Council may suspend a student's enrolment for four consecutive or separate main semesters during study duration in the faculty if he presents an excuse that prevents him from attending regularly in studies, which has been investigated by the Education and Student Affairs Committee. In case of necessity, the University Council may increase the period of suspension of enrolment.

Article (30): Student Evaluation

- The marks of each course are distributed as percentages of the total mark, divided into Course Activities, Mid-Term Assessment, Technical Assessment, and Final Assessment.
- With considering Article (18), the student must attend at least 75% of tutorial and laboratory hours for the course, otherwise he is considered failed, in this case he is not allowed to attend the technical assessment or final assessment of the course (if any).
- The Faculty Council may, based on the study of the Executive Committee of the program and after taking the opinion of the relevant department council and according to the nature of the courses, decide to hold the exam in all or part of the course in a way that allows it to be corrected electronically. This will be presented to the University's Education and Student Affairs Council for approval and submitted to the Supreme Council for approval.
- For the student to pass a course, the minimum mark that must be earned in the final assessment is 40% of the total final assessment marks, otherwise the student will fail the course irrespective of the total marks he earned in the course and he will get an F grade in this course.
- The student fails the course if he obtains an F grade (less than 60% of the course marks) or was not allowed to attend the final assessment because of exceeding the absence percentage or cheating ... etc. or did not attend the final assessment without submitting a prior excuse that is accepted by the Education and Student Affairs Committee and approved by the Faculty Council of Engineering.
- Zero-Credit courses are marked as Pass or Fail. The student gets a grade but does not contribute to the cumulative GPA. To pass the course, the student should get at least 60% of the course total marks.

Article (32): Study Dismissal and Academic Warning

- A student gets an academic warning if his Cumulative GPA at any main semester is less than 2.0.
- If the student's cumulative GPA exceeds 2.0 in any semester, then the number of consecutive academic warnings is reset.
- The student will be dismissed from FoE - ASU study if he does not register in any courses for more than two main semesters during his study period without an excuse acceptable to the college.
- The student will be dismissed from FoE - ASU study if he obtains a GPA of less than 1.0 in the first three consecutive main semesters.

- For first-level students in specialized programs, the student will be dismissed from FoE - ASU study if he obtains a GPA of less than 2.0 in four consecutive main semesters.
- As long as it does not contradict what was stipulated in the previous point, a student will be dismissed from FoE - ASU if he gets Semester GPA less than 2.0 in six consecutive semesters excluding Summer Semesters.
- The student will be dismissed from FoE - ASU if he fails to achieve the graduation requirements during the maximum study duration, or the rules stipulated in Article (21) of these bylaws do not apply to him.
- The student who is exposed to study dismissal due to his inability to raise his GPA to at least 2.0 will be offered an additional and final chance to register in 2 consecutive main semesters and a summer semester to raise his GPA to at least 2.0 and achieves the graduation requirements, provided that he has successfully completed at least 75% of the total number of credit hours required for graduation and there is a chance for the student to raise his GPA to at least 2.0.

Article (34): Declaration of Honour

For a student to achieve the declaration of honour, he / she has to fulfil the following conditions:

- Maintain a cumulative GPA of 3.3 throughout his study at the Program and any semester GPA should be higher than or equal 3.3.
- Does not fail any course throughout his study at the Program.
- Did not get any penalty throughout his study at the Faculty.

Article (35): Minimum Number of Students for Course Opening (Elective courses or Courses out of program's study plan)

- The minimum number of students required to open a course out of program's study plan is 10 students, or 75% of the number of students registered in this program level, whichever is less.
- The minimum number of students required to open an elective course is 5 students or 25% of the number of students in this program level, whichever is less.
- Course opening in these cases is subject to the availability of teaching staff and the proper allocation of resources.

University Requirements

In Egypt, the university is considered a core of Human Thinking at its highest level, and the source of investment and development of human resources. It is responsible for the progress of the Arabian Civilization, sustaining the Historical Heritage of the Egyptian Society, and conserving its traditions. It is also concerned with the education of Religion, Morals and Nationalism (Egyptian National Law for Universities, Law 49 for Year 1972). Therefore, Ain Shams University graduate should be:

1. Aware of national, regional and international contemporary issues, to have an intellectual and enlightened personality and to interact effectively in the community through different communication skills.

To achieve this goal, Ain Shams University has designed a number of courses planned to build the student personality, develop his skills, and increase his awareness of different topics. These courses are called University Requirements. The Faculty of Engineering Ain Shams University has selected some of these courses to be offered within the Engineering Programs. These courses are:

List of University requirements courses.

Code	Course Title	Weight			Contact Hours			
		CH	ECTS	SWL	Lec	Tut	Lab	TT
ASU041	Technical English Language*	0	4	100	2	2	0	4

* A placement test in Technical English Language will be conducted for some admitted students to the Faculty of Engineering according to regulations announced by the Faculty Council. If the student passes this test, then he will be exempted from taking the Technical English Language Course. The Technical English Language course is a pre-requisite for all Faculty requirements courses.

** Based on the rules of the university, the student has to pass this course in any main semester before the graduation.

*** Specific Courses that have office hours as clarified in Article (18) and Appendix 3.

Faculty Requirements

All Majors offered at FoE - ASU are Engineering Programs. The graduates have the privilege of being Engineers and are automatically enrolled in the Egyptian Engineering Syndicate (EES). The graduates are also entitled to take the Fundamentals of Engineering Exam offered by the National Council of Examiners for Engineering and Surveying (NCEES), based on the agreement between EES and NCEES.

According to the National Academic Reference Standards (NARS-2018), The Engineering Graduate must be able to (A-Level):

2. Identify, formulate, and solve complex engineering problems by applying engineering fundamentals, basic science and mathematics.
3. Develop and conduct appropriate experimentation and/or simulation, analyse and interpret data, assess and evaluate findings, and use statistical analyses and objective engineering judgment to draw conclusions.
4. Apply engineering design processes to produce cost-effective solutions that meet specified needs with consideration for global, cultural, social, economic, environmental, ethical and other aspects as appropriate to the discipline and within the principles and contexts of sustainable design and development.
5. Utilize contemporary technologies, codes of practice and standards, quality guidelines, health and safety requirements, environmental issues and risk management principles.
6. Practice research techniques and methods of investigation as an inherent part of learning.
7. Plan, supervise and monitor implementation of engineering projects.
8. Function efficiently as an individual and as a member of multi-disciplinary and multi-cultural teams.
9. Communicate effectively – graphically, verbally and in writing – with a range of audiences using contemporary tools.
10. Use creative, innovative and flexible thinking and acquire entrepreneurial and leadership skills to anticipate and respond to new situations.
11. Acquire and apply new knowledge; and practice self, lifelong and other learning strategies.

In addition, ASU – FoE Graduate must be able to:

12. Adapt and/or mitigate with changing circumstances and environments that are related to engineering issues.
13. Relate engineering issues to Sustainable Development Goals and deal with ecosystems related to them on the local or global level.

To achieve these Competencies, a set of courses must be completed as a Faculty Requirement. These courses are divided into Basic Science Courses and Basic Engineering Courses.

List of Faculty requirements courses.

* A placement test in Mathematics will be conducted for all admitted students except some High School Degrees which are determined by the Faculty Council. If the student passes this test, then he will be exempted from taking Basic Mathematics Course.

** Specific Courses that have office hours as clarified in Article (18) and Appendix 3.

*** The code for the Graduation Project (2) depends on the program, it is mentioned in the study plan or each program.

Discipline Requirements

According to the National Academic Reference Standards (NARS-2018), each discipline graduate (Mechanical – Architectural – Electrical – Civil), has to meet specific competences.

Mechanical Engineering Requirements

In addition to the Competencies for all Engineering Programs the Basic Mechanical Engineering graduate must be able to (B-Level):

14. Model, analyse and design physical systems applicable to the specific discipline by applying the concepts of: Thermodynamics, Heat Transfer, Fluid Mechanics, solid Mechanics, Material Processing, Material Properties, Measurements, Instrumentation, Control Theory and Systems, Mechanical Design and Analysis, Dynamics and Vibrations.
15. Plan, manage and carry out designs of mechanical systems and machine elements using appropriate materials both traditional means and computer-aided tools and software contemporary to the mechanical engineering field.
16. Select conventional mechanical equipment according to the required performance.
17. Adopt suitable national and international standards and codes to: design, build, operate, inspect and maintain mechanical equipment and systems.

To achieve these Competencies, a set of courses must be completed as a Basic Mechanical Engineering Requirement.

Architectural Engineering Requirements

In addition to the Competencies for all Engineering Programs the Basic Architectural Engineering graduate must be able to (B-Level):

14. Create architectural, urban and planning designs that satisfy both aesthetic and technical requirements, using adequate knowledge of: history and theory, related fine arts, local culture and heritage, technologies and human sciences.
15. Produce designs that meet building users' requirements through understanding the relationship between people and buildings, and between buildings and their environment; and the need to relate buildings and the spaces between them to human needs and scale.
16. Generate ecologically responsible, environmental conservation and rehabilitation designs; through understanding of: structural design, construction, technology and engineering problems associated with building designs.
17. Transform design concepts into buildings and integrate plans into overall planning within the constraints of: project financing, project management, cost control and methods of project delivery; while having adequate knowledge of industries, organizations, regulations and procedures involved.
18. Prepare design project briefs and documents; and understand the context of the architect in the construction industry, including the architect's role in the processes of bidding, procurement of architectural services and building production.

To achieve these Competencies, a set of courses must be completed as a Basic Architectural Engineering Requirement.

Electrical Engineering Requirements

In addition to the Competencies for all Engineering Programs the Basic Electrical Engineering graduate must be able to (B-Level):

14. Select, model and analyze electrical power systems applicable to the specific discipline by applying the concepts of: generation, transmission and distribution of electrical power systems.
15. Design, model and analyze an electrical/electronic/digital system or component for a specific application; and identify the tools required to optimize this design.
16. Design and implement elements, modules, sub-systems or systems using technological and professional tools.
17. Estimate and measure the performance of an electrical/electronic system and circuit under specific input excitation and evaluate its suitability for a specific application.
18. Adopt suitable national and international standards and codes to: design, build, operate, inspect and maintain electrical/electronic/digital equipment, systems and services.

To achieve these Competencies, a set of courses must be completed as a Basic Electrical Engineering Requirement.

Civil Engineering Requirements

In addition to the Competencies for all Engineering Programs the BASIC CIVIL Engineering graduate must be able to (B-Level):

14. Select appropriate and sustainable technologies for construction of buildings, infrastructures and water structures; using either numerical techniques or physical measurements and/or testing by applying a full range of civil engineering concepts and techniques of: Structural Analysis and Mechanics, Properties and Strength of Materials, Surveying, Soil Mechanics and Fluid Mechanics.
15. Achieve an optimum design of Reinforced Concrete and Steel Structures, Foundations and Earth Retaining Structures; and at least three of the following civil engineering topics: Transportation and Traffic, Roadways and Airports, Railways, Sanitary Works, Irrigation, Water Resources and Harbours; or any other emerging field relevant to the discipline.
16. Plan and manage construction processes; address construction defects, instability and quality issues; and maintain safety measures in construction and materials.
17. Deal with biddings, contracts and financial issues including project insurance and guarantees; and assess environmental impacts of civil engineering projects.

To achieve these Competencies, a set of courses must be completed as a Basic Civil Engineering Requirement.

Program 12: Materials Engineering Program "MTRL"

Program Description

The program aims to supply the students with the basic and global concepts of science and technology in order to comprehend the relation between materials' structure and its properties and applications, which will open the field to develop and manufacture materials with special properties that suits the required application. This will help in developing various industries and setting specifications and criteria for quality assurance. Materials engineering applications incorporates different metals, ceramics, polymers, composite materials, semiconductors and other materials that could be used in electronics, communication, environmental, medicine, biotechnology, nanotechnology and other applications. Now this field attracts global attention which makes it important to be included into the higher educational system in Egypt.

Career Prospects

Materials engineers have versatile opportunities in manufacturing, petrochemical, ore extraction, consulting firms, research entities and educational institutes or other similar organizations. Possible jobs are Material engineer, design engineer, metallurgist, product developer, research assistant, quality engineer, biomedical engineer, patent examiner and technical sales engineer.

Duties of material engineer are: material selection, material design, processing, testing and characterization of materials and data, quality control, training and documentation.

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 1: No Poverty	<input type="checkbox"/> GOAL 2: Zero Hunger	<input checked="" type="checkbox"/> GOAL 3: Good Health & Well-being	<input checked="" type="checkbox"/> GOAL 4: Quality Education	<input type="checkbox"/> GOAL 5: Gender Equality	<input checked="" type="checkbox"/> GOAL 6: Clean Water & Sanitation
<input checked="" type="checkbox"/> GOAL 7: Affordable & Clean Energy	<input type="checkbox"/> GOAL 8: Decent Work & Economic Growth	<input checked="" type="checkbox"/> GOAL 9: Industry, Innovation & Infrastructure	<input type="checkbox"/> GOAL 10: Reduced Inequality	<input type="checkbox"/> GOAL 11: Sustainable Cities & Communities	<input checked="" type="checkbox"/> GOAL 12: Responsible Consumption & Production
<input checked="" type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

There are no specified concentrations in this Program.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

Also, the student has the chance to get some credit hours from Clausthal University of Technology in Germany according to the agreement between both universities.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Materials Engineering Program graduate must be able to:

14. Apply general math, science and engineering skills to the solution of engineering problems related to materials,
15. Analyse the relationship between structure, properties, processing and design of materials and their final impact on the product design and performance,
16. Understand systems applicable to the material engineering discipline by applying the concepts of: Thermodynamics, Fluid Mechanics, heat and mass transfer and engineering chemistry, solid Mechanics, material processing, material Properties, measurements, and mechanical Design
17. Develop, prepare and characterize new materials by applying concepts of homogeneity and polymorphism, phase transformation, crystalline structures and reaction kinetics,
18. Select, Model, analyse, design, treat and test material systems of monolithic composite and hybrid materials in engineering systems such as mechanical, biomedical, electronic, communication and advanced building systems,
19. Adopt suitable national and international standards and codes to: design, build, operate, inspect and maintain industrial equipment and systems.
20. Have the experimental and computational skills for a professional career as team member or leader in multidisciplinary engineering projects using organization tools,
21. Be aware of the value of sustainable learning and environmental/social issues surrounding materials.

Graduate Attributes

The graduates from Materials Engineering Program:

- Apply analytic critical and systemic thinking to identify, diagnose, and solve materials-related challenges.
- Uphold high ethical standards in their professional practice, considering the social and environmental impacts of materials and processes.
- Possess the skills to design and develop materials and processes that minimize resource consumption, waste generation, and environmental impacts.
- Master a wide spectrum of materials engineering knowledge and specialized skills, specifically in the realm of environmental aspects and sustainability.
- Commit to continuous learning, staying updated with emerging materials science and engineering advancements and adapting to changing technological and global demands.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

Course Tree for 'Materials Engineering' Program

Program 13: Manufacturing Engineering Program "MANF"

Program Description

Nowadays there are rising needs to modernize manufacturing industry to cope with the global challenges of producing cost effective products, competing at international markets and adapting to rapidly changing technologies for modern industry. Manufacturing Engineering is a complex discipline that requires a great deal of diverse and specialized knowledge. Manufacturing engineers are required by companies involved in manufacturing any kind of products, ranging from machines, equipment and robotics to all consumer products. The Program provides a broad technical background for students, in addition to proficiency in engineering methods, problem-solving and decision-making skills to a variety of manufacturing engineering issues. The aim of the program is to graduate manufacturing engineers who will be responsible for the design, selection of materials, specifications and the improvement of production processes and equipment. Responsibility for design and enhance of manufacturing systems, production management and control, as well as plant maintenance are also required by manufacturing engineers.

Career Prospects

Manufacturing Engineering Program Graduates may seek jobs at companies involved in manufacturing any kind of products, ranging from machines, equipment and robotics to all consumer products. They often have their choice of challenging positions such as manufacturing engineer, production manager, design engineer, quality specialist, process analyst, maintenance engineer, operations manager, continuous improvement engineer, or technical sales engineer.

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

There are no specified concentrations in this Program.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Manufacturing Engineering Program graduate must be able to:

14. Understand and Operate physical systems applicable to the specific discipline by applying the concepts of: Thermodynamics, Fluid Mechanics, Instrumentation and Control Theory and Systems.
15. Model and analyse physical systems applicable to the specific discipline by applying the concepts of: Material Properties, solid Mechanics, Material Processing, Measurements, and Mechanical Design.
16. Design mechanical systems and machine elements using appropriate materials both traditional means and computer-aided tools and software contemporary to the mechanical engineering field.
17. Understand, select and plan various materials processing technologies to produce different types of products.
18. Design for manufacturability of optimal products, process and the equipment, tooling and environment necessary for their manufacture to meet desired needs within realistic constraints.
19. Apply knowledge, problem solving techniques, and hands-on skills in assessment of design, operation and continuous improvement of manufacturing systems, including automated manufacturing processes, process controls, manufacturing operations management, and systems integration as well as smart or digital manufacturing.
20. Understanding of the creation of competitive advantage through manufacturing planning, strategy, and control.
21. Adopt suitable national and international standards and codes to: design, build, operate, inspect and maintain industrial equipment and systems.

Graduate Attributes

The graduates from Manufacturing Engineering Program:

- Master a wide spectrum of engineering knowledge and specialized skills and can apply acquired knowledge using theories and abstract thinking in real life situations.
- Apply analytic critical and systemic thinking to identify, diagnose and solve engineering problems with a wide range of complexity and variation.
- Behave professionally and adhere to engineering ethics and standards.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.
- Recognize his/her role in promoting the engineering field and contribute in the development of the profession and the community.
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles.
- Use techniques, skills and modern engineering tools necessary for engineering practice.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies.
- Communicate effectively using different modes, tools and languages with various audiences. to deal with academic/professional challenges in a critical and creative manner.
- Demonstrate leadership qualities, business administration and entrepreneurial skills.
- Work with mechanical design and manufacturing systems.
- Use of mathematics and physical and engineering sciences and systems analysis tools in components and machines and produce design and manufacture.

- Use the computer graphics for design, communication and visualization.
- Analyze multi-disciplinary mechanical, electrical, thermal and hydraulic systems.
- Demonstrate the ability to design, develop, implement, and improve integrated systems that include people, materials, information, equipment and energy.
- Understand the engineering relationships between the management tasks of planning, organization, leadership, control, and the human elements in production, research and service organizations.
- Underlining the key roles of safety dimensions, sustainable technology, environmental friendliness, and cleaner production measures in manufacturing, materials, managerial and economic alternatives as reflected in the program course structure.
- Students will learn engineering sciences and demonstrate the application of this knowledge to electro-mechanical systems.
- Analyze and investigate the inter-disciplinary characteristics of mechanical, electrical and hydraulic systems.
- Graduates should have wide choices leading to specialization in mechanics, electronics, design, computer software or other areas.

Required Courses

Course Tree for 'Manufacturing Engineering' Program

Program 14: Mechatronics Engineering and Automation Program "MCTA"

Program Description

The Mechatronics and Automation program integrates multidisciplinary fields of science that includes a mechanical engineering, Electronics, computer Science and control Engineering to enhance the safety, performance, efficiency, and the ability of solving real life problems associated with mechanical systems, industrial automation, mechatronic in automotive applications, mechatronic in healthcare and biomedical devices, Nano/micro mechatronic systems.

Career Prospects

The graduate of the program is expected to get a job in one of the following positions:

1. Automobiles Industry
2. Robotics Industry
3. Automation
4. Oil Industry
5. System design
6. Embedded system
7. Bionics system design
8. Sales engineer for robotics and automation

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 1: No Poverty	<input type="checkbox"/> GOAL 2: Zero Hunger	<input checked="" type="checkbox"/> GOAL 3: Good Health & Well-being	<input checked="" type="checkbox"/> GOAL 4: Quality Education	<input type="checkbox"/> GOAL 5: Gender Equality	<input type="checkbox"/> GOAL 6: Clean Water & Sanitation
<input type="checkbox"/> GOAL 7: Affordable & Clean Energy	<input checked="" type="checkbox"/> GOAL 8: Decent Work & Economic Growth	<input checked="" type="checkbox"/> GOAL 9: Industry, Innovation & Infrastructure	<input type="checkbox"/> GOAL 10: Reduced Inequality	<input type="checkbox"/> GOAL 11: Sustainable Cities & Communities	<input checked="" type="checkbox"/> GOAL 12: Responsible Consumption & Production
<input type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

The program provides five different fields in which the students in this program can specialize. These five fields are: Autotronics, Bio-Mechatronics, Nano-Mechatronics, Industrial Mechatronics, and Robotics and Artificial Intelligence. Each concentration includes 5 compulsory courses.

1. Autotronics: The concentration is to incorporate elements of mechanical, electrical, electronics, software and safety engineers as applied to the design, manufacture and operation of automobiles.

2. Bio-Mechatronics: The concentration aims to integrate parts of biological organisms, mechanical elements, and electronics for improving the quality life of humans. It also encompasses the field of robotics and neuroscience.

3. Nano-Mechatronics: The concentration is to how to integrate electrical and mechanical functionality on the nanoscale.

4. Industrial Mechatronics: The concentration of this area is to integrate control systems, electrical, electronic systems, computers, and mechanical systems in automated manufacturing processes.

5. Robotics and Artificial Intelligence: The concentration of this area is to integrate Artificial Intelligence with the industrial manipulators and mobile robots to perform tasks that require intelligence, perception, and decision-making.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Mechatronics Engineering and Automation Program graduate must be able to:

14. Synthesize and integrate mechatronic subsystems to create custom solutions for different engineering problems while dealing with technical uncertainties.
15. Integrate a wide range of analytical tools, techniques, equipment, and software packages pertaining to the discipline.
16. Use computational facilities and techniques, measuring instruments, workshops and laboratory equipment.
17. Put the necessary specifications describing the different variants of mechatronic equipment such as Robotics, CNC machines, CAD/CAM systems, pneumatic and hydraulic equipment, etc. for purpose of purchasing and contracting.
18. Write the necessary software for the equipment and the control of the mechatronic systems.
19. Competence in the safe use and operation of hand tools and machine tools that are used during the implementation phases of mechatronic systems.
20. Distinguish the layout and the key parameters to the field of the concentration within the mechatronics and automation engineering as listed below.

Concentration	Competence
Autotronics	20a. Create and/or re-design mechatronic components/systems in the fields of Automobiles
Bio-Mechatronics	20b. Develop mechanical, electrical, electronic, programming and communication elements necessary for improving the quality life of humans
Nano-Mechatronics	20c. Assess the characteristics and performance of mechatronic components, systems and fabrication processes for Nano scale systems
Industrial Mechatronics	20d. Design mechatronic components that can be used in the synthesis of industrial automation
Robotics and Artificial Intelligence	20e. Design robotic components with the aid of Artificial Intelligence to perform tasks that require intelligence and decision making

Graduate Attributes

The graduates from Mechatronics Engineering and Automation Program:

- Apply knowledge of mathematics, science and engineering concepts to the solution of engineering problems.
- Use the basic theoretical and practical knowledge of mechatronic and automation system components in his/her practical field.
- Use the state-of-the-art technologies of the multidisciplinary specialization of Mechatronics and automation engineering program to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability.
- Identify, formulate and solve fundamental engineering problems.
- Design a system, component, or process to find affordable and reliable solutions, to improve the daily quality of life.
- Conduct Research and Development (R&D) activities to create innovative mechatronic solutions having direct impact on industrial, commercial, and social scales
- Solve problems in the areas of integrated mechanics, electronics, computers and software systems.
- Analyze and investigate the inter-disciplinary characteristics of mechanical, electrical and hydraulic systems.
- Design, develop, and maintain safety critical mechatronic systems.
- Apply the learned management and business skills to effectively contribute and compete in local, regional and international markets.
- Engage in self- and life- long learning.
- Work within a multidisciplinary team during the analysis, design and implementation phases of mechatronics engineering projects

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

List of Mechatronics Engineering and Automation Program Requirements courses.

Code	Course Title	Weight			Contact Hours			
		CH	ECTS	SWL	Lec	Tut	Lab	TT
	Ain Shams University Requirements	11	18	450	12	1	2	15
	Faculty of Engineering Requirements	34	68	1700	26	24	20	70

Program 15: Landscape Architecture Program "LAAR"

Program Description

Landscape Architecture Engineering solves real-life problems. This discipline finds the best solutions through the application of knowledge, experience and skills. Engineers help to define and refine the way of life by providing innovative, high-performance, safer, cleaner or more comfortable daily-used facilities for human beings. They seek improvements through the processes of invention, design, manufacturing and construction.

The products of Landscape Architecture engineering activities are intended to be sustainable. However, the drawbacks are associated with such activities; for example, the water, air, the environment and acoustic pollutions have been aggravated by many engineering marvels created throughout the past decades.

The engineer's problem-solving complexity grows as the world's social and technological problems become more closely related. For example, the problem of air pollution cannot be solved physically without considering the social, legal, political, and ethical conflicts. Moreover, the impact of the available engineering solutions on the interests of the individuals and groups should be considered. Engineering studies provide students with the advanced, effective, technology-based education that should meet the expected needs of future science and technology. They should also promote the technical understanding and problem-solving skills required to face the engineering challenges of tomorrow.

Moreover, it motivates students, faculty and staff to learn, grow, achieve and serve the needs of society nationally, regionally and internationally. It also prepares students for a productive and rewarding career in engineering based on strong moral and ethical foundation.

Career Prospects

Landscape architecture' is a professional title. It is recognized by the International Labour Organization and it is used throughout the world Landscape architects typically work across five main areas: landscape design; landscape management; landscape planning; landscape science and urban design. Alternative careers for landscape architects include: Conceptual Landscape Developer. Landscape Planner. Greenway Initiator. Landscape Assessor. Landscape-Architect. Garden Designer. Landscape Contractor. Designer-Builder. Product Design/Manufacture. Public services and Tourism Planner.

Typical employers of landscape architects include: Architecture and urban planning consultancy, the construction industry; real-estate developers, local authorities; private practices; public bodies; water networks companies, Roads companies

In the private sector, landscape architects are largely employed by architect and landscape architect companies, or by companies specializing in landscape engineering.

In the public sector, landscape architects tend to work for environmental agencies, local authorities and government agencies. There are also opportunities with voluntary organizations.

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 1: No Poverty	<input type="checkbox"/> GOAL 2: Zero Hunger	<input checked="" type="checkbox"/> GOAL 3: Good Health & Well-being	<input checked="" type="checkbox"/> GOAL 4: Quality Education	<input type="checkbox"/> GOAL 5: Gender Equality	<input type="checkbox"/> GOAL 6: Clean Water & Sanitation

<input checked="" type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

There are no specified concentrations in this Program.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

The program is also in partnership with Mediterranea University of Reggio Calabria (UNIRC), Italy for a Master Degree of Architecture. Students joining this agreement will pay an additional fee, to substitute expenses for the study, advising and coordination that will take place in Italy during the last semester(s) in Italy in addition to other semester(s) in Egypt. The Graduates should receive one B.Sc. certificate from ASU, and M.Sc. from Mediterranea University of Reggio Calabria.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Landscape Architecture Program graduate must be able to:

14. Create architectural, urban and landscape designs that satisfy both aesthetic and technical requirements, using adequate knowledge of: history and theory, related fine arts, local culture and heritage, technologies and human sciences.
15. Integrate relationship of structure, energy systems, landscape materials, and construction elements into design process in different scales.
16. Discuss, search and formulate informed opinions appropriate at specific context and circumstances affecting landscape architecture profession and practice.
17. Judge landscape architecture decisions considering balanced costs, benefits, safety, quality, reliability, and environmental impact.
18. Propose creative and innovative solution for problems facing landscape architecture projects.
19. Professionally merge the engineering knowledge and landscape architecture, understanding, and feedback to improve design, products and/or services.
20. Deal with sensitive spaces and locations using the required understanding for human needs and socio-economic dynamics.
21. Use and apply information technology and contemporary computer applications while dealing with landscape architecture issues

22. Prepare design project briefs and documents; and understand the context of the landscape architect in the construction industry, including the architect's role in the processes of bidding, procurement of architectural services and building production.
23. Generate ecologically responsible, environmental conservation and rehabilitation designs; through understanding of: structural design, construction, technology and engineering problems associated with architectural landscape designs.

Graduate Attributes

The graduates from Landscape Architecture Program:

- Master a wide spectrum of engineering knowledge and specialized skills and can apply acquired knowledge using theories and abstract thinking in real life situations.
- Apply analytic critical and systemic thinking to identify, diagnose and solve engineering problems with a wide range of complexity and variation.
- Behave professionally and adhere to engineering ethics and standards.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.
- Recognize his/her role in promoting the landscape architecture field and contribute to the development of the profession and the community.
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles.
- Use techniques, skills and modern engineering tools necessary for engineering practice.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies.
- Communicate effectively using different modes, tools and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner.
- Demonstrate leadership qualities, business administration and entrepreneurial skills.
- Create architectural, urban landscaping and planning designs that satisfy both aesthetic and technical requirements, using adequate knowledge of history and theory, related fine arts, local culture and heritage, technologies and human sciences.
- Produce designs that meet building users' requirements through understanding the relationship between people' needs and the built environment, and between the built environment and nature.
- Generate ecologically responsible, environmental conservation and rehabilitation designs; through understanding of structural design, construction, technology and engineering problems associated with building designs.
- Transform design concepts into indoor and outdoor spaces and integrate plans into overall planning within the constraints of project financing, project management, cost control and methods of project delivery; while having adequate knowledge of industries, organizations, regulations and procedures involved.
- Prepare design project briefs and documents and understand the context of the architect in the construction industry, including the architect's role in the processes of bidding, procurement of architectural services and building production.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

List of Landscape Architecture Program Requirements courses.

Code	Course Title	Weight			Contact Hours			
		CH	ECTS	SWL	Lec	Tut	Lab	TT
	Ain Shams University Requirements	11	18	450	11	4	1	16
	Faculty of Engineering Requirements	34	68	1700	21	35	16	72

Program 16: Environmental Architecture and Urbanism Program "ENVR"

Program Description

Driven by the current urgency of building more environmentally friendly buildings and cities, the environmental Architecture and Urbanism Program (ENVR) aims at preparing architects and urban designers specialized in environmental design. Graduates are capable of understanding the relationship between humans and buildings and between buildings and their environment. They can integrate all the aspects dealing with the built environment and how it is planned, designed, used, furnished, landscaped, managed, and valued by the society in their creative thinking while dealing with complex architectural and urban environment problems. The program introduces students to building science and enables them to conceive the basic concepts of sustainable architecture and urbanism. They are trained to balance functional and ecological demands when developing policies or designs for new construction. Graduate will be able to deal with modern techniques and tools for learning and linking theory and practice. All efforts are directed towards achieving environmental architecture and urbanism.

Career Prospects

The acquired skills through the program qualifies the graduates to occupy a wide range of jobs, fulfilling the market's diversity of needs. They can work as architects or urban designers whether in multi-national and local companies or in architectural, urban design firms and environmental design consultancies. Moreover, graduates will be equipped to work in fields of interior design, visualization using computer graphics, 3D Modeling, and model making. Specializations extend as well to dimensions of project/construction management, site supervision, and quantity surveying. The ENVR graduates can deal with environmental building assessment techniques and be aware of issues related to building energy efficiency, net zero systems and net plus systems. The current market in Egypt is thriving for such kind of interdisciplinary-skilled graduates who have strong background in environmental design that is highly needed nowadays.

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 1: No Poverty	<input type="checkbox"/> GOAL 2: Zero Hunger	<input checked="" type="checkbox"/> GOAL 3: Good Health & Well-being	<input checked="" type="checkbox"/> GOAL 4: Quality Education	<input type="checkbox"/> GOAL 5: Gender Equality	<input type="checkbox"/> GOAL 6: Clean Water & Sanitation
<input type="checkbox"/> GOAL 7: Affordable & Clean Energy	<input checked="" type="checkbox"/> GOAL 8: Decent Work & Economic Growth	<input type="checkbox"/> GOAL 9: Industry, Innovation & Infrastructure	<input type="checkbox"/> GOAL 10: Reduced Inequality	<input checked="" type="checkbox"/> GOAL 11: Sustainable Cities & Communities	<input type="checkbox"/> GOAL 12: Responsible Consumption & Production
<input checked="" type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

There are no specified concentrations in this Program.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

The program is also in partnership with Mediterranean University of Reggio Calabria (UNIRC), Italy for a Master Degree of Architecture. Students joining this agreement will pay an additional fee, to substitute expenses for the study, advising and coordination that will take place in Italy during the last semester(s) in Italy in addition to other semester(s) in Egypt. The Graduates should receive one B.Sc. certificate from ASU, and M.Sc. from Mediterranean University of Reggio Calabria.

Furthermore, the program under the ASU umbrella is part of the CNRD – Centres for Natural Resources and Development- project, which is one of 5 centres of Excellence in Germany under the Exceed program. The CNRD is coordinated by Cologne University of Applied Sciences (CUAS – Germany) and includes 13 universities partners from Indonesia, Chile, Mexico, Nepal, Egypt, Jordan, Kenya, Ethiopia, Sudan, Bangladesh, Vietnam, and Brazil. The CNRD is supported by the Federal Ministry for Economic Cooperation and Development, Exceed and DAAD.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Environmental Architecture and Urbanism Program graduate must be able to:

14. Create aesthetically pleasing and technically sound architectural and urban designs by using the architectural and urban planning principles, history and theories, technologies, economics, human sciences and local culture and heritage.
15. Produce designs that meet building users' requirements through studying the relationship between people and buildings, and between buildings and their environment.
16. Prepare design project briefs and documents and analyse the context of the architecture in the construction industry, including the architect's role in the processes of bidding, procurement of architectural services, and building production.
17. Solve problems and creatively design sustainable building schemes or urban contexts that demonstrate awareness and integration of information and processes in project work by using building environmental systems and management together with the underlying concepts and theories.
18. Realize the process of sustainable building and urban design and their various components through the integration of structural design, construction, technology and engineering problems associated with building designs.
19. Coordinate and monitor the production of information and data from a variety of sources, including drawings, specifications, codes of practice, related to principals of environmental architecture and urbanism.
20. Apply appropriate mathematical and computer-based methods for Modeling and analysing environmental design problems.
21. Judge engineering decisions considering balanced costs, benefits, risks, safety, quality, reliability, and environmental impact, while having adequate knowledge of industries, organizations, regulations and procedures involved.

22. Produce professional technical and workshop drawings to transform the concepts into buildings using traditional drawing tools and computer-aided drawings' techniques, as well as building information Modeling techniques.
23. Exchange knowledge and skills with engineering sectors and industrial sectors working in the field of environmental control.

Graduate Attributes

The graduates from Environmental Architecture and Urbanism Program:

- Master a wide spectrum of architectural engineering knowledge and specialized skills, specifically in the realm of environmental aspects and sustainability and can apply acquired knowledge using theories and abstract thinking in real life situations;
- Apply analytic critical and systemic thinking to identify, diagnose and solve architectural engineering problems with a wide range of complexity and variation;
- Behave professionally and adhere to architectural engineering and sustainability ethics and standards;
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance;
- Recognize his/her role in promoting the environmental architectural engineering field and sustainability, and contribute in the development of the architecture profession and the community;
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles;
- Use techniques, skills and modern engineering tools necessary for environmental and eco-friendly architectural engineering practice. In addition to applying his/her own knowledge and practical skills to create and develop sustainable architectural designs starting from the briefing phase till beyond the construction and operating phase.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies;
- Communicate effectively using different modes, tools and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner;
- Demonstrate leadership qualities, business and project administration and entrepreneurial skills.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

List of Environmental Architecture and Urbanism Program Requirements courses.

Course Tree for 'Environmental Architecture and Urbanism' Program

Program 17: Housing Architecture and Urban Development Program "HAUD"

Program Description

Globally, over 50% of the population lives in urban areas; and moving towards urbanization is accelerating. As urban populations grow, the housing gap will widen, exacerbating inequality and threatening the traditional view of cities as reliable drivers of economic growth. Though providing affordable, adequate and secure housing is a basic human need, housing provision persists a key urban challenge worldwide. The Housing Architecture and Urban Development (HAUD) program aims at preparing architects and urban planners specialized in housing and the built environment design for sustainable urban development. Graduates go on to obtain professional degrees in architectural engineering with specialization in housing and urban development...

The program is focusing on the technical, aesthetic and cultural components of design for housing and public buildings. Moreover, it qualifies graduates with all necessary competences to design and to understand the housing market and real estate development as well as to use digital technologies and tools to generate and analyse spatial data. Graduates will gain knowledge in housing typology, provision, policies, finance, legislation, and management and will be able to produce integrated architecture documents, and land mapping. The HAUD emphasizes the integration of social, economic, environmental, along with physical aspects to create safe, inclusive, healthy, and sustainable cities. It introduces graduates to contemporary trends and practices in housing industry and urban development schemes such as smart housing/cities as well as principles of Sustainable Development Goals. The program will prepare graduates to take leading roles in the professional practice in the field of architecture, housing and urban development on local and international level.

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 1: No Poverty	<input type="checkbox"/> GOAL 2: Zero Hunger	<input checked="" type="checkbox"/> GOAL 3: Good Health & Well-being	<input checked="" type="checkbox"/> GOAL 4: Quality Education	<input type="checkbox"/> GOAL 5: Gender Equality	<input type="checkbox"/> GOAL 6: Clean Water & Sanitation
<input type="checkbox"/> GOAL 7: Affordable & Clean Energy	<input type="checkbox"/> GOAL 8: Decent Work & Economic Growth	<input type="checkbox"/> GOAL 9: Industry, Innovation & Infrastructure	<input checked="" type="checkbox"/> GOAL 10: Reduced Inequality	<input checked="" type="checkbox"/> GOAL 11: Sustainable Cities & Communities	<input type="checkbox"/> GOAL 12: Responsible Consumption & Production
<input checked="" type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input checked="" type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Career Prospects

HAUD program graduates possess the versatility to excel in various roles within the realm of housing design and urban development. Their expertise spans across multiple tiers, encompassing architectural intricacies, urban planning, and even delving into real estate and land management nuances. These capable individuals are primed to assume positions as architects and urban planners across diverse entities, including governmental bodies like the Ministry of Housing Utilities and Urban Development, global organizations like UN-Habitat, as well as local enterprises and advisory firms. Given the ongoing surge in construction activities and the prospective emergence of novel urban communities and ambitious national projects in Egypt, there is a pressing demand for adept graduates who are not only well-versed in

the Sustainable Development Goals (SDGs) principles but also harbor an all-encompassing perspective to grapple with the multifaceted challenges in the realm of housing architecture and urban development.

Program Concentrations

There are no specified concentrations in this Program.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

The program is also in partnership with Mediterranea University of Reggio Calabria (UNIRC), Italy for a Master Degree of Architecture. Students joining this agreement will pay an additional fee, to substitute expenses for the study, advising and coordination that will take place in Italy during the last semester(s) in Italy in addition to other semester(s) in Egypt. The Graduates should receive one B.Sc. certificate from ASU, and M.Sc. from Mediterranea University of Reggio Calabria.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Housing Architecture and Urban Development Program graduate must be able to:

14. Create aesthetically pleasing and technically sound architectural designs ranging across different scale based on the most contemporary trends and smart systems and theories of architecture, urban and planning.
15. Produce designs that meet building users' requirements through understanding the relationship between people and buildings; and the need to relate indoor and outdoor to human needs, scale and environment.
16. Prepare design project briefs and documents and analyse the context of the architecture in the construction industry, Infrastructure including the architect's role in the processes of bidding, procurement of architectural services, and building production.
17. Solve problems and creatively design housing schemes or urban contexts that demonstrate awareness and integration of information and processes in project work by considering their contexts (social, economic, political, institutional, / environmental and physical) technical installations, infrastructure and engineering problems associated with building designs with the underlying concepts and theories.
18. Coordinate and monitor the production of information and data from a variety of sources, including drawings, specifications, codes of practice, related to principles of Architecture, Housing and urban development.
19. Apply appropriate mathematical and computer-based methods for modelling and analyse spatial and non-spatial data to produce integrated architecture documents and Land Mapping
20. Judge engineering decisions considering balanced costs, benefits, risks, safety, quality, reliability, and housing market, while having adequate knowledge of industries, organizations, regulations, and procedures involved.
21. Produce professional technical and workshop drawings to transform the concepts into buildings using traditional drawing tools and computer-aided drawings' techniques, as well as building information modelling techniques, urban informatics.
22. Exchange knowledge and skills with engineering sectors and industrial sectors working in the field of Housing production.

23. Evaluate and formulate Strategies and models of policy for develop or regenerate resources towards sustainable housing provision, informal upgrading and urban development.

Graduate Attributes

The graduates from Housing Architecture and Urban Development Program:

- Master a wide spectrum of architectural engineering knowledge and specialized skills, specifically in the realm of environmental aspects and sustainability and can apply acquired knowledge using theories and abstract thinking in real life situations.
- Apply analytic critical and systemic thinking to identify, diagnose and solve architectural engineering and urbanization problems with a wide range of complexity and variation.
- Behave professionally and adhere to architectural engineering and sustainability ethics and standards.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.
- Recognize his/her role in promoting the environmental architectural engineering field and sustainability, and contribute to the development of the architecture profession, housing industry and the community.
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles.
- Acclimate resiliently with the socio-economic fluctuations in real-estate business environments, and take advantages of the successive developments in technology, big data and artificial intelligence.
- Use techniques, skills and modern engineering tools necessary for environmental and eco friendly architectural engineering and housing industry practice. In addition to applying his/her own knowledge and practical skills to create and develop sustainable architectural designs starting from the briefing phase till beyond the construction and operating phase.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies.
- Communicate effectively using different modes, tools and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner.
- Demonstrate leadership qualities, business and project administration and entrepreneurial skills.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

List of Housing Architecture and Urban Development Program Requirements courses.

Code	Course Title	Weight			Contact Hours			
		CH	ECTS	SWL	Lec	Tut	Lab	TT
	Ain Shams University Requirements	11	18	450	11	4	1	16

Course Tree for 'Housing Architecture and Urban Development' Program

Program 18: Communication Systems Engineering Program "COMM"

Program Description

The Communication Systems Engineering program seeks to introduce the new in the science and technology of communication systems at the educational, practical, and scientific research levels through the application of quality systems and cooperation with specialized bodies locally and internationally. This program graduates' engineers with the ability to deal with the latest development in the fields of communication, optical, and electronic systems to meet the requirements of the market at the moral and professional levels by creating the appropriate conditions for the development of different skills of students and cooperate with specialized industrial and research bodies locally and internationally.

Career Prospects

The program aims at generating a graduate who is well trained in modern telecommunication industry as well as having a background in communication systems that enables him to fit easily within a modern telecommunication work environment and be able to identify market needs in this fast-moving segment of business. The graduate is exposed to a wide variety of courses to build an open scope to telecommunication engineering which is interdisciplinary in nature. The graduate acquires his degree by taking a balanced curriculum that is pre- dominantly concerned with communication systems on different levels and does not neglect required basic sciences needed for this field.

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 1: No Poverty	<input type="checkbox"/> GOAL 2: Zero Hunger	<input type="checkbox"/> GOAL 3: Good Health & Well-being	<input checked="" type="checkbox"/> GOAL 4: Quality Education	<input type="checkbox"/> GOAL 5: Gender Equality	<input type="checkbox"/> GOAL 6: Clean Water & Sanitation
<input type="checkbox"/> GOAL 7: Affordable & Clean Energy	<input type="checkbox"/> GOAL 8: Decent Work & Economic Growth	<input checked="" type="checkbox"/> GOAL 9: Industry, Innovation & Infrastructure	<input type="checkbox"/> GOAL 10: Reduced Inequality	<input type="checkbox"/> GOAL 11: Sustainable Cities & Communities	<input type="checkbox"/> GOAL 12: Responsible Consumption & Production
<input type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

The program qualifies graduates to work as Electronics and telecommunication engineers. The graduate can be specialized in one of the following three concentrations (fields):

1. Circuits and Systems.
2. Physical and Wave Electronics.
3. Signals and Communication Systems.

The student has to select six elective courses for a total of (18) Credit Hours with at least four of these courses from one of the mentioned fields.

1. Circuits and Systems: This is the concentration for the graduate engineer to work in national and international companies concern with electronic design.

2. Physical and Wave Electronics: This is the concentration for the graduate engineer to work in telecommunication companies for transmission field, or in research field related to microwave and optical communications.

3. Signals and Communication Systems: This is the concentration for the graduate engineer to work in telecommunication companies in core network or in research field related to signal processing.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Communication Systems Engineering Program graduate must be able to:

14. Estimate and measure the performance of communication and electronic systems under specific input excitation and evaluate its suitability for a specific application.
15. Identify needs, plan and manage resources, and gather information for solving a specific communication problem and efficiently document this solution.
16. Have the technological abilities to design and implement elements, modules, sub-systems or systems.
17. Be familiar with and utilize professional tools for communication system engineering.
18. Design, model and analyse electronic, microwave, optical, and communication systems or components for a specific application and identify the tools required to optimize this design.
19. Classify and evaluate the applications and market segments to create a specific product including the estimation of the required resources.
20. Demonstrate additional abilities related to the field of the concentration within Communication Systems Engineering as listed below.

Concentration	Competence
Circuits and Systems	20a. Demonstrate additional abilities to design analog and/or digital circuits of any electronic system.

Physical and Wave Electronics	20b. Demonstrate additional abilities to analyse, design any microwave or optical communication system.
Signals and Communication Systems	20c. Demonstrate additional abilities to work on state-of-the-art research problems in signal processing, image and multimedia processing. 20d. Demonstrate additional abilities to manage and design any communication system.

Graduate Attributes

The graduates from Communication Systems Engineering Program:

- Master a wide spectrum of engineering knowledge and specialized skills and can apply acquired knowledge using theories and abstract thinking in real life situations.
- Apply analytic critical and systemic thinking to identify, diagnose and solve engineering problems with a wide range of complexity and variation.
- Behave professionally and adhere to engineering ethics and standards.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.
- Recognize his/her role in promoting the engineering field and contribute in the development of the profession and the community.
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles.
- Use techniques, skills and modern engineering tools necessary for engineering practice.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies.
- Communicate effectively using different modes, tools and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner.
- Demonstrate leadership qualities, business administration and entrepreneurial skills.
- Select, model and analyze a communication system that satisfies a given specification.
- Design, model and analyze electronic / communication system or component for a specific application; and identify the tools required to optimize this design.
- Design and implement elements, modules, sub-systems or systems in communication systems engineering using technological and professional tools.
- Estimate and measure the performance of electronic / communication system or circuit under specific input excitation, and evaluate its suitability for a specific application.
- Use fundamental knowledge to investigate new and emerging technologies and synthesize solutions to communication systems engineering problems.
- Demonstrate additional abilities to design analog and/or digital circuits of any electronic system.
- Demonstrate additional abilities to analyze, design any microwave or optical communication system.
- Demonstrate additional abilities to work on state-of-the-art research problems in signal processing, image and multimedia processing.
- Demonstrate additional abilities to manage and design any communication system.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

List of Communication Systems Engineering Program Requirements courses.

Program 19: Energy and Renewable Energy Engineering Program "ERGY"

Program Description

The program is an interdisciplinary program that covers the energy studies from electrical and mechanical points of view. It aims to study both conventional energy and renewable sources energy. Energy's flows, constraints, generation, transmission, distribution, consumption, and management knowledge are acquired through the period of study. Students are provided with a deep knowledge of conventional and renewable energy technologies generation and applications. Thermal power plants, machine construction, design, and stability are topics covered. Hydro, tidal, wave, wind, solar photovoltaic, solar thermal, concentrated solar power, biomass, geothermal and others are studied. Renewable energy applications are illustrated and evaluated both theoretically and economically. Power system networks (transmission and distribution) control and Modeling are explained. Energy management is discussed in detail using demand side management, energy efficiency, and energy consumption and audit are explained in detail. Finally, the program encourages problem identification and solving as well as critical thinking skills. All topics under study prepare the program graduates for the national, regional and international energy job market.

Career Prospects

This program qualifies its graduates to work in electrical power engineering, mechanical power engineering, energy and renewable energy engineering fields. Graduates can join electrical sector entities such as generation (conventional and renewable), transmission, and distribution companies either public or private. Power plants, control centres, petroleum industry, factories, maintenance applications, and energy management sectors can be a target for the program's graduates. Distribution installations, refrigeration and Air Conditioning, water desalination and distillation applications, and solar pumping fields are candidate jobs for the energy graduates.

Program Concentrations

There are no specified concentrations in this Program.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from

the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Energy and Renewable Energy Engineering Program graduate must be able to:

14. Model and analyse electrical power systems and electrical machines by applying energy systems concepts of: generation, transmission, distribution and protection of electrical power systems;
15. Select, analyse and control appropriate driving systems for different energy applications;
16. Model, analyse and design energy systems by applying energy concepts of: Thermal-fluid Mechanics, solid Mechanics, Material Properties and processing, Measurements, Control Systems, Dynamics and Vibrations;
17. Design of mechanical energy systems using appropriate materials via both traditional and computer-aided tools;
18. Select proper mechanical equipment according to the required specification;
19. Adopt suitable standards and codes to: design, build, operate, inspect and maintain mechanical energy systems;
20. Identify, analysis and evaluate the energy's conversion processes and management techniques;
21. Indicate and relate smart applications for energy systems; and
22. Test and evaluate the performance and suitability of energy systems.

Graduate Attributes

The graduates from Energy and Renewable Energy Engineering Program:

- Master a wide spectrum of engineering knowledge and specialized skills and can apply acquired knowledge using theories and abstract thinking in real life situations.
- Apply analytic critical and systemic thinking to identify, diagnose and solve engineering problems with a wide range of complexity and variation.
- Behave professionally and adhere to engineering ethics and standards.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.
- Recognize his/her role in promoting the renewable energy field and contribute to the envelopment of the profession and the community.
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles.
- Use techniques, skills and modern engineering tools necessary for engineering practice.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies.
- Communicate effectively using different modes, tools and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner.
- Demonstrate leadership qualities, business administration and entrepreneurial skills.
- Select, analyze and control appropriate driving systems for different energy application.
- Design of mechanical energy systems using appropriate materials via both traditional and computer-aided tools.
- Identify, analysis and evaluate the energy's conversion processes and management techniques.

- Test and evaluate the performance and suitability of energy systems.
- Distinguish the layout for Power generation stations and their related distribution network.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

Course Tree for 'Energy and Renewable Energy Engineering' Program

Program 20: Computer and Artificial Intelligence Engineering Program "CAIE"

Program Description

The systematic development of high-quality computer, intelligent, and software systems that are concerned with quality, cost, time, and several other requirements, demands well-qualified engineers in this field. Computer engineering, artificial intelligence, and software engineering are ones of the most promising fields in engineering and are considered important milestones in the ever-growing information technology sector. Targeted computer and artificial intelligence engineers develop algorithms and train neural networks to build intelligent tools and real-world smart applications. The main objective of this program is to graduate highly qualified engineers who are specifically experts in software development, data science, and programming. Therefore, graduates of this program are trained to apply engineering principles in each phase of software development life-cycle; requirements analysis, design, validation, implementation, testing, documentation, and management. This program focuses on modern methodologies in computer, intelligent, and software industry that represents, without a doubt, an important sector of the national economy.

Career Prospects

Graduates of this program will establish technical leadership proficiencies in the discipline of computer and artificial intelligence engineering. In addition, they will contribute as skilful engineers who are capable of participating and cooperating productively in their respective fields. The CAIE program opens the door to a world of high-level career opportunities to its graduates in computer engineering, artificial intelligence, software engineering, distributed and mobile computing, embedded systems, computer security, multimedia systems, data science, and others. Therefore, this program will meet the increasing demand for this specialization to address the market needs at the national, regional, and international levels.

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 1: No Poverty	<input checked="" type="checkbox"/> GOAL 2: Zero Hunger	<input checked="" type="checkbox"/> GOAL 3: Good Health & Well-being	<input checked="" type="checkbox"/> GOAL 4: Quality Education	<input type="checkbox"/> GOAL 5: Gender Equality	<input checked="" type="checkbox"/> GOAL 6: Clean Water & Sanitation
<input checked="" type="checkbox"/> GOAL 7: Affordable & Clean Energy	<input checked="" type="checkbox"/> GOAL 8: Decent Work & Economic Growth	<input checked="" type="checkbox"/> GOAL 9: Industry, Innovation & Infrastructure	<input checked="" type="checkbox"/> GOAL 10: Reduced Inequality	<input checked="" type="checkbox"/> GOAL 11: Sustainable Cities & Communities	<input checked="" type="checkbox"/> GOAL 12: Responsible Consumption & Production
<input checked="" type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input checked="" type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

Elective courses are distributed in the following four concentrations. The student has to select seven technical elective courses for a total of (18) credit hours with at least five of these (18) courses from one of the mentioned fields.

1. Multimedia and Computer Graphics: This concentration prepares the graduate to work in the field of graphics software development, including image processing, computer vision, computer animation, and games development.

2. Distributed and Mobile Computing: This concentration prepares the graduate to work in the field of distributed systems and networking, including cloud computing, wireless and mobile networks, digital forensics, IOT, and parallel computing.

3. Software Product Lines: This concentration prepares the graduate to work as a full-fledged software engineer who deeply understands all software development processes and aspects, including financial, managerial, and design, security, and performance aspects.

4. Data Science: This concentration prepares the graduate to work as a data scientist by covering a wide range of topics, including big-data, machine learning, deep learning, and various applications such as bioinformatics and business intelligence.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee to substitute expenses for the external Quality Audits/Moderation Boards. Graduates should receive two B.Sc. certificates, one from Ain Shams University, and another from the University of East London. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Computer and Artificial Intelligence Engineering Program graduate must be able to:

14. Design and implement elements, modules, sub-systems or systems using technological and professional tools.
15. Select and analyse appropriate design techniques for computer and artificial intelligence engineering.
16. Estimate and measure the performance of a digital system and circuit under specific input excitation and evaluate its suitability for a specific application.
17. Identify needs, plan and manage resources, and gather information for solving a specific digital problem and document and communicate this solution efficiently.
18. Carry out design, development, testing, debugging, operation and maintenance of digital systems/services such as computer systems, circuit boards, software systems, and mixed (embedded) systems.
19. Establish an environment to build, test and release digital systems in a more rapid, frequent and reliable manner by emphasizing the collaboration and communication of developers and operations team members.
20. Select the most suitable technologies to deploy solutions to various kinds of problems and develop solutions using them
21. Abide to software engineering standards and best practices
22. Demonstrate additional abilities related to the field of the concentration within computer and artificial intelligence engineering as listed below:

Concentration	Competence
Multimedia and Computer Graphics	22a. Demonstrate additional abilities to model, analyse, and design multimedia and computer graphics systems potentially including pattern recognition, computer vision, computer animation, gaming, visualization, and/or human-computer interaction
Distributed and Mobile Computing	22b. Demonstrate additional abilities to model, analyse, manage, and design secure distributed and mobile computing systems potentially including cloud computing systems, distributed embedded systems, and/or various forms of parallelism

Concentration	Competence
Software Product Lines	22c. Demonstrate additional abilities to analyse, evaluate, design, and integrate secure, reliable, and high-quality software solutions including managing the necessary software engineering processes and the corresponding business model
Data Science	22d. Demonstrate additional abilities to model, design, and implement intelligent data science applications potentially requiring data mining, machine learning, deep learning, analytics, and text understanding

Graduate Attributes

The graduates from Computer and Artificial Intelligence Engineering Program:

- Master a wide spectrum of engineering knowledge and specialized skills and can apply acquired knowledge using theories and abstract thinking in real life situations.
- Apply analytic critical and systemic thinking to identify, diagnose and solve engineering problems with a wide range of complexity and variation.
- Behave professionally and adhere to engineering ethics and standards.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.
- Recognize his/her role in promoting the engineering field and contribute in the development of the profession and the community.
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles.
- Use techniques, skills and modern engineering tools necessary for engineering practice.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies.
- Communicate effectively using different modes, tools and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner.
- Demonstrate leadership qualities, business administration and entrepreneurial skills.
- Design and implement elements, modules, sub-systems, or systems using technological and professional tools.
- Select and analyse appropriate design techniques for computer engineering and software systems.
- Estimate and measure the performance of a digital system and circuit under specific input excitation and evaluate its suitability for a specific application.
- Identify needs, plan and manage resources, and gather information for solving a specific digital problem and document and communicate this solution efficiently.
- Carry out design, development, testing, debugging, operation, and maintenance of digital systems/services such as computer systems, circuit boards, software systems, and mixed (embedded) systems.
- Establish an environment to build, test and release digital systems in a more rapid, frequent, and reliable manner by emphasizing the collaboration and communication of developers and operations team members.
- Select the most suitable technologies to deploy solutions to various kinds of problems and develop solutions using them.
- Abide to software engineering standards and best practices.
- Demonstrate additional abilities related to the field of the concentration within computer and artificial intelligence engineering.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

List of Computer and Artificial Intelligence Engineering Program Requirements courses.

Code	Course Title	Weight			Contact Hours			
		CH	ECTS	SWL	Lec	Tut	Lab	TT
	Ain Shams University Requirements	11	18	450	12	1	2	15

Course Tree for 'Computer and Artificial Intelligence Engineering Program'

Program 21: Building Engineering Program "BLDG"

Program Description

The purpose of this program is to provide students with the necessary skills and knowledge for a successful career in building engineering. The program is designed with a holistic approach that focuses on the development of both industry-relevant skills and academic competencies. The program offers an excellent opportunity for collaboration between different disciplines (Structural, Construction Management, Architectural and Electromechanical Engineering) and promotes an integrated approach to the teaching and learning of building engineering.

The program offers a diverse and rigorous curriculum that includes the fundamentals of structural analysis and design of reinforced concrete and steel buildings, as well as numerous topics in the construction management of building projects. The program also covers basic topics from different disciplines such as architectural design, energy-efficient building design as well as HVAC systems and technical installations in buildings to give students a comprehensive overview of the building industry. The program also integrates new technologies such as Building information modeling (BIM) that enables architects, engineers, designers, and contractors to model and share information about building construction projects in digital form.

Career Prospects

Graduates of this department has a variety of opportunities to work, of the building engineering program, you will be qualified for positions at companies specializing in the design, analysis, operation, construction, and management of a wide range of residential, commercial, and industrial building projects. Our graduates can be found at different companies and organizations, for example:

- Government authorities,
- Consulting firms in civil engineering and construction,
- Civil engineering contractors and project managers,
- Environmental engineering organizations,

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

The program provides the undergraduate student with a thorough foundation and technologies in the basic tenets of Structural and Construction Project Management. The program provides two different fields in which the students in this program can specialize. These two fields are:

1. Structural Engineering
2. Construction Engineering Management

1. Structural Engineering is concerned with the structural design and structural analysis of buildings, bridges, towers and other structures. This involves identifying the loads which act upon a structure and the forces and stresses which arise within that structure due to those loads, and then designing the structure to successfully support and resist those loads. The loads can be self-weight of the structures, other dead load, live loads, moving (wheel) load, wind load, earthquake load, load from temperature change etc. The structural engineer must design structures to be safe for their users and to successfully fulfil the function they are designed for (to be serviceable). Due to the nature of some loading conditions, sub-disciplines within structural engineering have emerged, including wind engineering and earthquake engineering.

2. Construction Engineering Management gives students a specialized focus on planning, scheduling, Resources Management, quantity take off, computer applications, cost estimating, Risk and Safety Management, contracts, problem solving, people and networking, management and leadership skills.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Building Engineering Program graduate must be able to:

14. Select appropriate and sustainable technologies for construction of buildings; using either numerical techniques or physical measurements and/or testing by applying a full range of civil engineering concepts and techniques of: Structural Analysis and Mechanics, Properties and Strength of Materials, Surveying, Soil Mechanics and Fluid Mechanics.
15. Achieve an optimum design of Reinforced Concrete and Steel Structures, Foundations and Earth Retaining Structures; and Transportation and Traffic.
16. Plan and manage construction processes; address construction defects, instability and quality issues; and maintain safety measures in construction and materials.
17. Deal with biddings, contracts and financial issues including project insurance and guarantees; and assess environmental impacts of civil engineering projects.
18. Produce designs that meet building users' requirements through understanding the relationship between people and buildings, and between buildings and their environment; and the need to relate buildings and the spaces between them to human needs and scale.

19. Generate ecologically responsible, environmental conservation and rehabilitation designs; through understanding of: structural design, construction, technology and engineering problems associated with building designs.
20. Apply computer applications to design and manage building construction projects.

Graduate Attributes

The graduates from Building Engineering Program:

- Master a wide spectrum of engineering knowledge and specialized skills, specifically in the realm of environmental aspects and sustainability and can apply acquired knowledge using theories and abstract thinking in real life situations.
- Apply analytic critical and systems thinking to identify, diagnose and solve architectural engineering problems with a wide range of complexity and variation.
- Behave professionally and adhere to architectural engineering and sustainability ethics and standards.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.
- Recognize his/her role in promoting the architectural engineering field and contribute to the development of the architecture profession and the community.
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles.
- Use techniques, skills, and modern engineering tools necessary for architectural engineering practice. In addition to applying his/her own knowledge and practical skills to create and develop architectural designs starting from the briefing phase till beyond the construction and operating phase.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies.
- Communicate effectively using different modes, tools, and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner.
- Demonstrate leadership qualities, business and project administration and entrepreneurial skills.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

List of Building Engineering Program Requirements courses.

Code	Course Title	Weight			Contact Hours			
		CH	ECTS	SWL	Lec	Tut	Lab	TT
	Ain Shams University Requirements	11	18	450	13	0	0	13

Course Tree for 'Building Engineering' Program

Program 22: Civil Infrastructure Engineering Program "CISE"

Program Description

Civil engineering today is concerned with the deterioration of the nation's roads, bridges, water and power distribution systems, storm and sanitary sewers and other public infrastructure. The aim of the Civil Infrastructure Engineering Program is to graduate civil engineers responsible for the life-cycle of the system he creates and must be capable of optimizing the total system performance of large-scale public works projects, including their social and environmental impacts, in a way that addresses critical issues of infrastructure behaviour, deterioration science, and structural rehabilitation. On top of these fields comes surveying engineering, sanitary environment, transportation engineering, water-related engineering projects who can enrich the water resources and public works field.

Career Prospects

Graduates of this department has a variety of opportunities to work, for example:

- Government authorities.
- Consulting firms in civil engineering and construction.
- Civil engineering contractors and project managers.
- Water and sanitation utility companies.
- Environmental engineering organizations.
- Coastal engineers developing coastal environment systems.
- Water resources management authority.

Relation to Sustainable Development Goals

<input type="checkbox"/> GOAL 1: No Poverty	<input type="checkbox"/> GOAL 2: Zero Hunger	<input type="checkbox"/> GOAL 3: Good Health & Well-being	<input checked="" type="checkbox"/> GOAL 4: Quality Education	<input type="checkbox"/> GOAL 5: Gender Equality	<input checked="" type="checkbox"/> GOAL 6: Clean Water & Sanitation
<input type="checkbox"/> GOAL 7: Affordable & Clean Energy	<input type="checkbox"/> GOAL 8: Decent Work & Economic Growth	<input checked="" type="checkbox"/> GOAL 9: Industry, Innovation & Infrastructure	<input type="checkbox"/> GOAL 10: Reduced Inequality	<input checked="" type="checkbox"/> GOAL 11: Sustainable Cities & Communities	<input type="checkbox"/> GOAL 12: Responsible Consumption & Production
<input type="checkbox"/> GOAL 13: Climate Action	<input type="checkbox"/> GOAL 14: Life Below Water	<input type="checkbox"/> GOAL 15: Life on Land	<input type="checkbox"/> GOAL 16: Peace & Justice Strong Institutions	<input type="checkbox"/> GOAL 17: Partnerships to achieve the Goal	X

Program Concentrations

The program provides the undergraduate student with a thorough foundation and technologies in the basic tenets of civil engineering and technologies. The program provides three different fields in which the students in this program can specialize. These three fields are:

1. Transportation Engineering
2. Geomatics and Environmental Engineering
3. Water Engineering

1. Transportation Engineering is concerned with moving people and goods efficiently, safely, and in a manner conducive to a vibrant community. This involves specifying, designing, constructing, and maintaining transportation

infrastructure which includes streets, canals, highways, rail systems, airports, ports, and mass transit. It includes areas such as transportation design, transportation planning, traffic engineering, some aspects of urban engineering, queueing theory, pavement engineering, Intelligent Transportation System (ITS), and infrastructure management.

2. Geomatics and Environmental Engineering is the process by which a surveyor measures certain dimensions that occur on or near the surface of the Earth. Surveying equipment, such as levels and theodolites, are used for accurate measurement of angular deviation, horizontal, vertical and slope distances. With computerization, electronic distance measurement (EDM), total stations, GPS surveying and laser scanning have to a large extent supplanted traditional instrument. Data collected by survey measurement is converted into a graphical representation of the Earth's surface in the form of a map. This information is then used by civil engineers, contractors and realtors to design from, build on, and trade, respectively. Elements of a structure must be sized and positioned in relation to each other and to site boundaries and adjacent structures. Although surveying is a distinct profession with separate qualifications and licensing arrangements, civil engineers are trained in the basics of surveying and mapping, as well as geographic information systems. Surveyors also lay out the routes of railways, tramway tracks, highways, roads, pipelines and streets as well as position other infrastructure, such as harbours, before construction. Environmental engineering, emphasis is based both on the design of systems for water supply, water treatment, soil treatment, wastewater treatment, and waste management, as well as on the design of physical, chemical and biological unit operations and processes encountered in these systems.

3. Water Engineering is concerned with the collection and management of water (as a natural resource). As a discipline it therefore combines elements of hydrology, environmental science, meteorology, conservation, and resource management. This area of civil engineering relates to the prediction and management of both the quality and the quantity of water in both underground (aquifers) and above ground (lakes, rivers, and streams) resources. Water resource engineers analyse and model very small to very large areas of the earth to predict the amount and content of water as it flows into, through, or out of a facility. Although the actual design of the facility may be left to other engineers. Also concerned with design of [pipelines](#), water supply network, drainage facilities (including bridges, dams, channels, culverts, levees, storm sewers), and canals. Hydraulic engineers design these facilities using the concepts of fluid pressure, fluid statics, fluid dynamics, and hydraulics, among others.

Agreements with another University

The program is in partnership with the University of East London (UEL), United Kingdom for a Bachelor Dual Degree. Students joining this agreement will pay an additional fee, to substitute expenses for the external Quality Audits/Moderation Boards that will take place in Egypt. The Graduates should receive two B.Sc. certificates, one from the University of East London, and one from Ain Shams University. Students are allowed to study a full year or more in London with a 10% reduction in the UK tuition fees.

Program Competences

In addition to the competences for Graduates from Ain Shams University and all Engineering Programs, the Civil Infrastructure Engineering Program graduate must be able to:

14. Select appropriate and sustainable technologies for construction of buildings, infrastructures and water structures; using either numerical techniques or physical measurements and/or testing by applying a full range of civil engineering concepts and techniques of: Structural Analysis and Mechanics, Properties and Strength of Materials, Surveying, Soil Mechanics and Fluid Mechanics.

15. Achieve an optimum design of Reinforced Concrete and Steel Structures, Foundations and Earth Retaining Structures, Transportation and Traffic, Roadways and Airports, Railways, Sanitary Works, Irrigation, Water Resources and Harbours; or any other emerging field relevant to the discipline.
16. Plan and manage construction processes; address construction defects, instability and quality issues; and maintain safety measures in construction and materials.
17. Deal with biddings, contracts and financial issues including project insurance and guarantees; and assess environmental impacts of civil engineering projects.
18. Use the principles of engineering, soil science, biology, and chemistry to develop solutions to environmental problems. They work to improve recycling, waste disposal, public health, and water and air pollution control. They also address global issues, such as unsafe drinking water, climate change, and environmental sustainability.

Graduate Attributes

The graduates from Civil Infrastructure Engineering Program:

- Master a wide spectrum of civil engineering knowledge and specialized skills.
- Apply acquired knowledge using theories and abstract thinking in real life situations.
- generate effective solutions by using engineering approaches in the field of Civil Infrastructure Engineering.
- Are well versed in technology, social, and environmental issues.
- Are responsible for the life-cycle of the systems they create.
- Are capable of optimizing the total system performance of large-scale civil infrastructure projects, including their social and environmental impacts.
- Communicate effectively using different modes, tools and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner.
- Demonstrate leadership qualities, business administration and entrepreneurial skills.

Required Courses

In order to get a Bachelor of Science Degree in this program, and to satisfy the Program Competences, the following set of courses need to be completed.

List of Civil Infrastructure Engineering Program Requirements courses.

Code	Course Title	Weight			Contact Hours			
		CH	ECTS	SWL	Lec	Tut	Lab	TT
	Ain Shams University Requirements	11	18	450	13	0	0	13
	Faculty of Engineering Requirements	34	65	1625	25	29	18	72
PHM213	Differential Equations and Numerical Analysis	3	5	125	2	2	0	4
CEP214	Surveying (1)	3	5	125	2	2	1	5
CEP215	Surveying (2)	3	5	125	2	2	1	5
CEP313	Surveying (3)*	2	4	100	2	0	1	3
CEP314	Infrastructure Network Planning*	2	5	125	2	1	0	2
CEP222	Introduction to Transportation and Traffic Engineering*	2	4	100	2	1	0	2
CEP342	Railway Engineering Principles	3	5	125	2	3	0	5
CEP333	Highway Geometric and Structural Design	3	4	100	2	2	0	4
CEP251	Introduction to Environmental Engineering and Sustainability	3	5	125	2	2	0	4
CEP352	Design of Water and Wastewater Networks	3	5	125	2	2	0	4
CEP481	Selected Topics in Civil Infrastructure Engineering*	2	4	100	2	1	0	2
CES214	Structural Analysis	3	5	125	2	2	0	4
CES222	Concrete Structures Design (1)	3	6	150	2	3	0	5
CES324	Concrete Structures Design (2)	3	5	125	2	3	0	5
CES425	Concrete Structures Design (3)	3	5	125	2	3	0	5
CES432	Advanced Construction Methods and Techniques	3	5	125	2	2	0	4

Code	Course Title	Weight			Contact Hours			
		CH	ECTS	SWL	Lec	Tut	Lab	TT
CES343	Basics of Steel Structures Design*	2	4	100	2	1	0	2

* Only if applicable according to regulations announced by the Faculty council based on article (15).

ENG2xx			
Field Training			
0	8	12	0 CH

- The maximum allowed study duration is 8 academic years
 - Cumulative GPA at any main semester < 2.0 -> Academic Warning
 - Maximum consecutive academic warnings -> 6
 8 Weeks of Field / Practical training to be distributed over the study duration
 Training can be started after passing 26 CHs of the freshman level
